

I obtained my master degree of Science in Cell Biology and Histology and particularly in developmental-biology and -physiology field in 2005. During this degree, I mainly worked on developing rat CNS during perinatal period. I subsequently obtained my PhD degree in Embryology and Comparative Anatomy and particularly in developmental-neuroendocrinology and -physiology field in 2009. I studied the interactions between the different states of thyroid hormones and rat brain development during the perinatal period. I gained a remarkable experience in different biochemical and histological techniques and especially in the analysis of vertebrate brain morphology. Generally, I published several international papers and books. Therefore I also have a strong background in endocrinology and a more specific expertise in thyroidology. Generally, I am member and reviewer in several international societies, organizations and journals. However, my experimental work will not improve accordingly due to the lack of grants to reach the highest objectives. Thus, I am searching for a postdoctoral place, in developmental thyroid-brain axis, develop my individual skills and enhance my career prospects.

Australia Travel, We are the Work, The Tarnished Turtle, RealismPop: A Theory of Contemporary Art in the Internet Revolution, 44.
